

137 The cardamom grows in the deep and damp recesses of the ever-green forests on the Western Ghats. Many varieties of beautiful ferns and the useful rattan cane creeper and *vōlē* reeds are also found close to the mountain streams flowing in these forests.

● 136 Coorg fauna is the same as that of the rest of south India. In its forests are found elephant, tiger, bison, panther, boar, bear, porcupine, deer, and wild dog and jackal. The extensive clearing of the mountain-sides for coffee and orange plantations, the general love of hunting, and the possession of firearms have resulted in the decimation of wild life in Coorg.

II

131 The isolation and inaccessibility of Coorg, with its steep mountains, dense forests, and heavy rainfall, contributed to the maintenance and elaboration of the distinctive mode of life and culture of Coorgs. The Lingāyaṭ Rājas, who saw certain political and military advantages in the natural isolation of Coorg, tried to increase it. Richter tells us that they closed down certain roads leading to Mercara, and prohibited travelling by them.¹

But under British rule the existing roads were improved and new ones were built. Nowadays buses run regularly on all the main roads connecting different parts of Coorg with each other, and Coorg with her neighbours. Yet even now no railway line passes through Coorg and this restricts the amount of contact it has with the rest of India.

The isolation of Coorg in the past was far from absolute. Contact always did exist with neighbours, though such contact was limited and difficult. For instance, Coorgs in south-west Coorg went annually in caravans to Malabar to sell their surplus rice, and to buy jaggery,² coconuts, coconut oil, tobacco, and areca-nuts. Coorgs in south-east Coorg bought cattle in Mysore and went on pilgrimages to certain shrines like the Shrikantēshwara Temple in Nanjanagūd. Coorgs in central and north Coorg went on pilgrimages to the Subrahmanya Temple in South Canara.

184 Though Coorg is a very small country, it shows considerable cultural diversity. The areas to the north and east of Mercara, and

INTRODUCTION

3

the steep precipices of the Ghats are the coast line of Malabar and South Canara, intersected by broad, bright, serpentine rivers, and beyond, the dark blue Indian Ocean, dotted with sailing craft. The eastern frontier between the Cauvery and Lakshmana rivers exhibits an almost uninterrupted jungle inhabited by the Kurumbar, Lambani, and other wandering tribes.

133

River Systems

Coorg is well favoured with rivers and streamlets which give it an abundant and perennial water supply throughout the year except South Coorg where there is a dearth of it. Though perennial, they are not remarkable for their breadth. Of the rivers that flow eastward, the most important are the following:—

The Barapole, rising in the Brahmagiris with its tributary the Kallhole descending from the Heggala pass; the Udombi, the Yeramakuth, the Cadiamale, and the Mundrotu rivers from the Padinalkanad Range. The Yestakarti and Nujikal rivers descend from the Pattighat, and the Maringundi river from the Pushpagiri Range.

Rivers of the eastern watershed consist of the Cauvery and its tributaries. The Cauvery has its source at Talai Cauvery near Bagamandala and is the largest and most important river in Coorg. Its tributaries are the Ramathirtha and the Lakshmanathirtha, both of which rise in South Coorg and join the Cauvery in the Mysore Province. The Kakkabe, Kadanur, Muttermudi, and Chickla rivers, all of which assume considerable dimensions during the monsoon, rise in Padinalkanad and Mercara taluks, while the Hatti, Nadapur and Choran rivers from the Harangai river, and powerful tributaries rise in Nanjarajapatna taluk.

Flora

The flora of Coorg is typical of the prevailing vegetation throughout the Western Ghats. According to Conner, every species of vegetation attains a high degree of luxuriance, if not rankness, quite foreign in the neighbouring countries. Both flowers and blossoms have a brilliancy and variety unknown in the plains, and many of the wild plants possess a share of aromatic qualities both as to odour and flavour. The all-prevailing forest is distinguished by the people as Male-kadu (evergreen mountain forest), and the Kanave-kadu (deciduous growth at the lower levels of the passes). Arborecent growth at higher elevations varying from 3,500 feet is mostly represented by *Vateria indica*, *Canarium striatum*, *Calophyllum tomentosum*, *Michelia champaka*, *Polyalthia coffeoides* and others.

137

Fauna

Elephants range throughout all parts of Coorg. They frequent the forests towards the eastern frontier. They are not so numerous as before.

136

COORG TRIBES AND CASTES

- 136 Since 1902 systematic arrangements have been made by Government for their capture in pits as in Malabar, Cochin and Travancore. Bisons frequent the densest forests and highest hills, especially in Marenad and Hormalnad. Bears generally abound in the north-west. Tigers and leopards are also found. Sambur, spotted deer, and barking deer are general in the woods. The most important bird is the hornbill, but there are peacocks, water fowl and jungle-cock, over and above the most ordinary and common Indian birds. Snakes are plentiful and cobra haunt the bamboo forests. There is a large variety of fish. The best fish in size and quality is the plantain fish.

Meteorology and Climate

- 132 Coorg is a small country, and yet its high mountain ridges and narrow valleys, its wood-clad hill slopes and open champaign tracts greatly influence its atmospheric conditions. Still the dry eastern district may present as steady a climate as the moist hilly tract along the Ghats or the Mercara plateau. The hot, rainy and cold seasons have to be distinguished. Throughout the year the atmosphere is humid, and humidity is precipitated either in dense mists or in showers of rain. In July the monsoon reaches its greatest vehemence. The Coorg hills send the floods controlled by steep river banks to the east and west and stand forth in renewed beauty. In September the sun breaks through the dense atmosphere. In November the north-east winds carry heavy clouds from the eastern coast which discharge themselves chiefly in the east and south-east of Coorg. The greater part of December is foggy, but towards the end of the month the weather becomes delightfully clear and fresh. The annual rainfall at Mercara is 133 inches. On the whole, the influence of the Coorg climate with its average temperature of 60° F. is salubrious. The nights are cool throughout the year.

Prehistory

- 172 Our knowledge of the prehistory of Coorg is very scanty. Pre-historic dolmens or burial cairns are found in Coorg as in other parts of South India. The first discovery of them in large numbers was made by Lieut. Mackenzie in 1868 on Bane near Virajpet. Captain Cole followed it up with great enthusiasm and his excavations yielded interesting results. All the cairns found are either level with the ground, or their tops crop just a little out of it. When laid bare, they present a stone chamber 7 ft. x 4 ft. x 5 ft. composed of four upright granite slabs, 7 or 8 inches thick, and a capstone which projects over the uprights. The flooring is likewise of stone. The narrow front slab has an aperture of an irregular curve nearly 2 ft. in diameter broken out from the top and generally faces east. Sometimes a compartment may be two-chambered. These cairns are either

The sequel may as well be anticipated here, to connect the whole in one. A few months after, when in my own house at Bangalore, I was surprised by the sudden appearance of Mahomed Sahib, extremely emaciated, ill-dressed, and with a picture in his hand. He threw himself at my feet, and told me I have saved his life, that the Rájah had given him four months' leave, and desired him to carry his picture to me, in proof thereof. I refused it, however, when he told me he had returned a beggar, being stripped of every thing at the last barrier; but that he never would return. I saw him in a good place, shortly afterwards, well and happy. The Rájah, Ling-rájender Wodeer died in the year 1820, and was succeeded on the Musnud by his son, whom I had seen an infant in 1810. I have heard of no cruelties committed by the present Mahá Swámi, who is described as a mild, inoffensive young man.

[491]

The English have had, however, little or no intercourse with that country, since 1811, a road being opened through Wynád to the Malabar coast, and a capital ghaut made by our own pioneers. I have omitted to mention, that as this country abounds with royal tigers, it is absolutely necessary that they should be hunted every season, and the former Rájah seldom killed fewer than there were days in the year; and invariably gave a gold bangle to the first man who should touch the tiger, after he had fired, which must make brave soldiers."

[224]

[36]

The above extracts give a tolerably correct idea of Lingarájah's character and of the state of Coorg from the death of Vírarájendra to the deposition of the present ex-rájah in 1834. Vírarájendra was impelled to deeds of blood by a naturally savage temperament, hardened by habits of internecine warfare in which he was engaged almost throughout life, and inflamed towards the end of his career by paroxysms of the darkest suspicions, and a melancholy ever hovering on the brink of insanity. His brother, Lingarája, had none of his redeeming qualities. His cruelty was without excuse. He
